

LIGHTRONICS

Unity™ SC810 Scene Creator

Create  Record  Playback

The new SC810 scene creator is a stand-alone DMX-512 control system for LED stage fixtures, LED house lights, and DMX dimmers. Incredibly powerful it will record all 512 DMX control channels in each scene to create a total of eighteen scenes that are recorded in non-volatile memory. Scenes can be played back using the eight preset buttons or the ten programming faders. Scene playback with the faders can be manually adjusted for live real time control. Scenes may also be recorded via snapshot from any DMX control device. Multiple scenes can be recalled at the same time with highest level taking precedence. For more information visit us at www.lightronics.com/c512.

You too can create amazing lighting
with a simple touch of your hands.

- Record any or all 512 DMX control channels in each scene
- Records and playback up to 18 different scenes
- Intuitive address recall makes programming simple
- Desktop and wall mount versions available
